ABOUT

UX Research Lead with 8+ years establishing and scaling research functions across financial services, fintech, and enterprise software, from zero-to-one practice-building to mixed-methods programs that shaped product strategy at the most senior levels. Deep experience researching complex B2B workflows, multi-stakeholder ecosystems, and high-stakes user journeys in regulated environments. Proven ability to synthesize qualitative and quantitative insights, build research ops infrastructure, and translate findings into roadmap decisions that drive measurable business impact.

EXPERIENCE

JPMorgan Chase

UX Research Lead · Global Banking | Sep 2022 – Jun 2026

- Established and scaled UX research practice within Global Investment Banking, building research ops infrastructure including a centralized research repository and AI-assisted knowledge tool that scaled institutional insight across teams and eliminated duplicated research effort across a complex, multi-stakeholder enterprise environment.
- Led JPMorgan's first end-to-end equity capital markets deal lifecycle mapping program, an 8-week mixed-methods initiative with senior bankers across North America and EMEA, surfacing complex B2B workflow breakdowns across prospecting, opportunity tracking, and deal execution. Findings presented to the most senior product executive reporting to the JPMorgan CEO, driving six downstream product and strategy initiatives.
- Defined product requirements for a new investor intelligence platform by conducting deep-dive interviews with seven senior bankers across complex multi-user workflows; the resulting Jobs to Be Done framework became the shared language between research, product, and engineering and translated directly into prioritized data fields at launch.
- Uncovered root causes of platform adoption barriers through screen-sharing research across capital markets banker workflows in a regulated enterprise environment; findings directly shaped a new deal opportunity discovery capability whose requirements came verbatim from banker-described needs.

Autograph

Senior Researcher | Jul 2021 – Sep 2022

- Designed and executed a three-phase zero-to-one research program: 11 moderated interviews, 4 focus groups with high-spend users, and a MaxDiff survey of 4,000 consumers, that proved the existing product ranked fifth of six features users actually wanted, driving a full company product pivot.
- Built a two-persona segmentation framework from qualitative synthesis that became the strategic lens for product positioning, platform redesign, and go-to-market decisions across the organization.
- Applied MaxDiff forced-choice analysis and audience segmentation to quantify feature priorities at scale, providing leadership with statistically credible evidence to commit to a major change in product direction.

Goldman Sachs

UX Researcher | Aug 2019 – Jul 2021

- Supported product launches and feature development across Marcus, Goldman Sachs' consumer banking platform serving millions of members, through qualitative interviews, usability testing, and forced-choice analysis across savings, lending, and financial insights products in a regulated financial services environment.
- Created a research governance framework that enabled product managers and designers to run lightweight research studies independently, scaling research capacity without scaling headcount.
- Validated the Clarity Money acquisition integration into Marcus mobile through usability research, ensuring a coherent combined experience at launch.

SalesLoft

UX Researcher | Jan 2018 – Jul 2019

- Evaluated usability and friction across a complex B2B sales engagement platform and conversational intelligence integration, translating findings into actionable design recommendations adopted by the product team.
 - Designed a structured feedback loop between users and product through an NPS follow-up research process; mentored junior researchers on qualitative methods and stakeholder communication.
-

SKILLS

Research Methods

User Interviews · Usability Testing · Focus Groups · Contextual Inquiry · Diary Studies · Surveys · Jobs to Be Done (JTBD) · Concept Testing · Generative Research · Evaluative Research · Participant Recruitment · Longitudinal Research

Quantitative and Analytics

Mixed-Methods Research · MaxDiff Analysis · Conjoint Analysis · Behavioral Data Analysis · A/B Testing · Web Analytics · Net Promoter Score Research

Research Ops and Strategy

Research Practice-Building · Research Roadmap Development · Research Synthesis · Research Repository Design · Governance Frameworks · Journey Mapping · Persona Development · Stakeholder Alignment · AI-Assisted Research Workflows

Domain

Financial Services · Fintech · B2B SaaS · Enterprise Software · Regulated Environments · Consumer Platforms

Tools

UserTesting · Qualtrics · Figma · Confluence

EDUCATION

University of Michigan, Ann Arbor

M.S. in Information — Human-Computer Interaction

University of California, Riverside

B.A. in Political Science and Philosophy

VOLUNTEER

Board Member · Mentor for Change · Jan 2026 – Present

Mentor · Mentor for Change · Jan 2024 – Dec 2025
